Ceramics

The raw materials

For us, it is a matter of course that only materials with the best properties come into consideration for dental products. The biocompatibility is the ultimate priority, in the selection of raw materials. Moreover only a high-purity, nanoscale ZrO_2 is suitable for medical use. To ensure reproducible batch stability, the raw material must indicate an extremely homogenous grain size distribution.

Multi Additive Technology[®] – more than just color

We achieve brilliant color effects by adding selected ions of rare soils or transition metals into the zirconium matrix. Our balanced ion formulation and the homogeneous distribution in the zirconia structure is what we call Multi Additive Technology[®]. It is the key to excellent mechanical and optical characteristics.

By means of our Multi Additive Technology colored blanks show a natural chroma based on the definition in the VITA classical[®] color scale, while maintaining the natural translucency of the zirconia material.

Source: R&D Dental Direkt. Flex resistances measured in MPa in accordance with DIN EN ISO 6872 in the 3 point approach. Strengths can vary depending on the test methods and sample preparation. The values indicated in the DD processing instructions are exclusively determined by external and independent laboratories. 4-point strength values are usually lower than 3-point values. Translucency measured by means of a spectrophotometer on 1 mm thick, polished samples.

*Ideal results depend on individual circumstances.

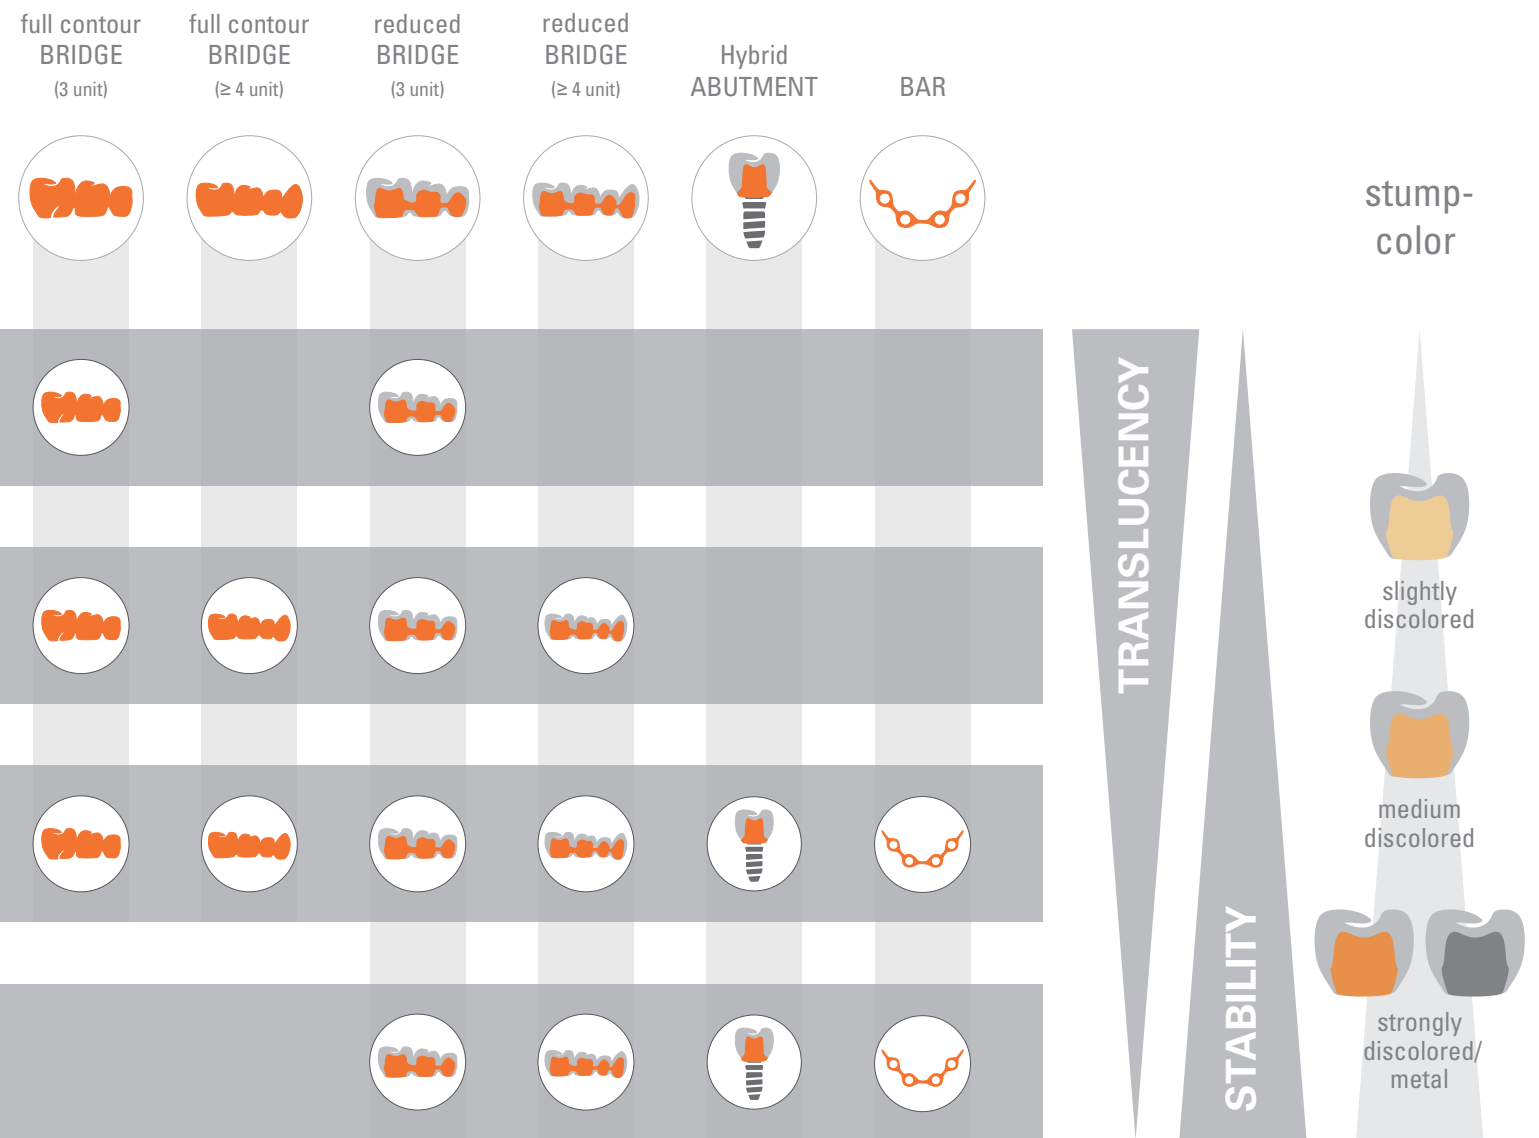

Influence on the final shade of a fixed restoration

When choosing a zirconia material for a specific clinical case several aspects should be considered, because the individual patients conditions might offer very different preconditions.

An important factor is the shade of the stump. If there is no serious deviation from the desired final shade of the fixed restoration, a super high translucent zirconia (DD cubeX²[®]) might be the material of choice.

The quantity of substance removal by preparation can be significant as well, as it affects the wall thickness of the restoration. The thinner a restoration the higher its translucency, the more an underlying tooth structure will influence the final shade appearance.

Indication and aesthetic guide

Indication guide_DD medical zirconia_Rev.05_2019/01

In case of a significantly discolored stump and preparation with low substance removal a more opaque zirconia (DD Bio ZX², DD Bio Z) could be used to cover up the underlying structure.

Especially when working with a high+ (DD cube ONE®) or super high translucent zirconia material also the cement has to be well-chosen, taking its level of opacity and shade into consideration. Opaque or colored cementation materials might change the shade effect of super high translucent zirconia. Translucent cements on the other side hardly influence the interaction of tooth structure and restoration.

You find our cementation guide on www.dentaldirekt.de/en/downloads

DDcubeX² 98

cubic zirconia system

perfectly suitable for

- high aesthetic monolithic crowns and bridges (up to 3 units, including molar restorations)
- especially for monolithic anterior restorations (bridges up to 3 units)
- cut back (one layer)
- high aesthetic veneering

Technical data	
Type	5Y-TZP
Classification	Class IIa according to MDD/MDR
Indication ISO 6872	type II, class 4 – max. 3 unit bridges incl. molar restorations
Color	white
Aesthetics	super high translucent
Sintering temperatur	1.450 °C
Bending strength	750 MPa (3 point test)
Fracture toughness	> 4,0 MPa√m
CAM system	open systems for Ø 98,5 mm blanks
DD Coloring liquids	DD Pro Shade C DD Basic Shade DD Art Elements

02.
Coloring Liquid &
Aesthetic Finish

DDBasicShade

The Classic (previously DD Bio ZX² monolith zero). Optimized for the individual painting technique (stain & glaze), minimal coating (cut back) or as a framework shade for full veneering or the combination of the techniques in one job.

For DD Bio Z, DD Bio ZX², DD cube ONE[®] and DD cubeX²[®]

Concept	“one-for-all” color system Primary color, basis for aesthetic characterisation
Color key	VITA [®] classical (Dentine)
Chroma	Higher chroma – higher grey value
Luminance	Less brightness

Please find the recommendations for the coloring in our instructions for use.

Dentin & Bleach

Available in 16 dentine colors according to VITA[®] and 3 bleach colors.

DDProShadeZ

The “Z variants” are optimized for the individual painting technique (stain & glaze), minimal coating (cut back) or as a framework shade for full veneering or the combination of the techniques in one job.

DDProShadeC

The “C variants” are optimized for the high level of translucency of the DD cube ONE® and DD cubeX2®. Monolithic full ceramic is possible with just glazing. A high aesthetic level and efficient work are combined into one.

For DD Bio Z, DD Bio ZX² and DD cube ONE®

For DD cube ONE® and DD cubeX²®

Concept	Optimised for the material specific translucency High degree of conformity with the color ring
Color key	VITA® classical (Dentine)
Chroma	Less chroma – lower grey value, “more sunny”
Luminance	More brightness

 Please find the recommendations for the coloring in our instructions for use.

The background of the slide is a grayscale micrograph showing a highly porous, interconnected network of polymer chains. The structure consists of irregular, rounded nodes connected by thin, wavy filaments, creating a complex, sponge-like morphology. A semi-transparent orange rectangular box is overlaid on the center of the image, containing the text.

03. High Performance Polymers

DDBioSplintPHI98

high impact thermoplastic

Your benefits:

- biocompatible – medical thermoplastic, no chemoplastic!
- industrially polymerised – minimal residual monomer content
- high fracture resistance and long-term stability (bruxism treatment)
- lowest water absorption – long-term stability of the fit
- good polishing properties – smooth surfaces are less susceptible to discoloration and plaque deposits, which at the same time minimises the risk of inflammation.

Technical data	
Material	100% Polymethyl methacrylate (PMMA)
Classification	Class IIa according to MDD/MDR
Indication	Bite guard splint, therapeutic splints, bite regulators (Due to its properties, the material is indicated for the oral cavity up to 12 month.)
Color	clear
Flexural strength ISO 178	92 MPa
Charpy impact strength +23°C ISO 179/1eU	45 kJ/m ²
Density ISO 1183	1,17 g/cm ³
Water absorption ISO 20795-1	0,02 µg/mm ³
Solubility ISO 20795-1	0,0 µg/mm ³
residual monomer content ISO 20795-1	< 0,7 %
CAM system	open systems for Ø 98,5 mm blanks

Hight	Order-no.
15 mm	K40115
20 mm	K40120
25 mm	K40125

 Consult instructions for use
Not all products are available in every country.

DDBioSplint^C98

innovative polycarbonate

Your benefits:

- biocompatible – medical thermoplastic, no chemoplastic!
- industrially polymerised–absolutely low residual monomer content
- high fracture resistance and continuous flexural load (treatment of bruxism)
- plaque resistant–lowest water absorption – dense structure
- good polishing properties
- shatterproof with added elasticity, (high) resilience

Technical data	
Material	100% Polycarbonate (PC)
Classification	Class I according to MDD/MDR
Indication	Bite guard splint, therapeutic splints, bite regulators, drilling templates (Due to its properties, the material is indicated for the oral cavity up to 30 days.)
Farbe	clear/slightly bluish
Flexural strength ISO 20795-1	≥ 98 MPa
Flexural modulus ISO 20795-1	> 2.300 MPa
Water absorption ISO 20795-1	3,6 µg/mm ³
Solubility ISO 20795-1	0,2 µg/mm ³
residual monomer content ISO 20795-1	≤ 0,0015 %
CAM system	open systems for Ø 98,5 mm blanks

Hight	Order-no.
15 mm	K 2.01.15
20 mm	K 2.01.20

 Consult instructions for use

DDtempMED98

high translucent polymers

Acrylic Polymer

DD temp MED blanks consist of thermoplastic acrylic polymer based on polymethyl methacrylate (PMMA), with no toxic or allergenic materials.

Your benefits:

- biocompatible – medical polymer material
- industrially polymerised – absolutely low residual monomer content
- high fracture resistance and continuous flexural load
- plaque resistant – lowest water absorption – dense structure
- good polishing properties
- CAM-optimised hardness (23 HV1) for good machinability

Technical data	
Material	Polymethyl methacrylate (PMMA)
Classification	Class IIa according to MDD/MDR
Indication	pre-colored dental milling blanks for the production of temporary crowns and bridges (Due to its properties, the material is indicated for the oral cavity up to 12 month.)
Flexural strength ISO 20795-1	~ 78 MPa
Flexural modulus ISO 20795-1	~ 2.988 MPa
Water absorption ISO 20795-1	19 – 25 µg/mm ³
Solubility ISO 20795-1	0,3 – 0,7 µg/mm ³
residual monomer content ISO 20795-1	0,02 %

DDpolyX ML 98

multilayer – natural colored polymers

Acrylic Polymer

DD poly X ML blanks consist of multilayer acrylic polymer based on polymethyl methacrylate (PMMA) without toxic or allergenic materials (according to ISO 10993-5).

Your benefits:

- 5 layers polymerized – very natural aesthetic effect
- biocompatible – medical polymer material
- industrially polymerised – low residual monomer content
- high fracture resistance and continuous flexural load
- plaque resistant – low water absorption – dense structure
- good polishing properties and abrasion resistance

Technical data	
Material	Polymethyl methacrylate (PMMA)
Classification	Class IIa according to MDD/MDR
Indication	suitable for making removable or temporary dental structures such as crowns and bridges (For temporary restorations, the material is indicated for the oral cavity up to 12 month.)
Flexural strength ISO 10477	90 MPa
Flexural modulus ISO 20795-1	2.300 MPa
Water absorption ISO 10477	25 µg/mm ³
Solubility ISO 10477	0,0 µg/mm ³

DDpeekMED98

the polymer steel

Medical PEEK

DD peek MED is the ideal combination of biocompatibility and ultimate strength.

Polyether ether ketone (PEEK) has a modulus of elasticity similar to human bone and is thus extremely wear-resistant. These attributes have made it a highly sought-after material in surgical endoprosthetics. Compared with titanium implants, stress peaks at the interface to the bones are reduced. Dental constructions also benefit from this property. This reduces the load on screw and adhesive bonds of the dental prosthesis as well. An ideal material for heavily load-bearing indications. Its total biocompatibility underscores the material through its inert property against body fluids.

Your benefits:

- Monomer-free
- Extremely loadable and wear-resistant
- Low density - very light
- Adheres with PMMA
- Suitable for allergy patients
- Outstanding sliding qualities (telescopes)

Technical data	
Material	Polyether ether ketone (PEEK)
Classification	Class IIa according to MDD/MDR
Indication	e.g. abutments and cervical gingival formers, bar constructions, tertiary constructions, telescope crowns, transversal links (due to its properties, the material is indicated for permanent use in the oral cavity) For the manufacture of fixed or removable dental framework constructions for long-term use.
Flexural strength ISO 20795-1	≥ 155 MPa
Flexural modulus* ISO 20795-1	≥ 3,8 GPa
Density* ISO 1183	1,5 g/cm ³
Water absorption ISO 20795-1	0,0 µg/mm ³

04.
More
Materials

DDBioCW

Milling blank based on CoCr

The DD Bio CW Blanks provide a high level of working safety and guarantees reliably good quality. The DD Bio CW blank is resistant to corrosion, biocompatible and free of nickel and beryllium. Outstanding aesthetic results can be achieved by a veneering with a material-specific veneering ceramic. The adherence oxide formers provide an optimal bond between metal and ceramic.

The DD Bio CW blank has been treated with a special heat treatment, which makes the alloy easy to machine and gives it outstanding properties due to a uniform microstructure.

Technical data
